## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Putnam et al. (USPN 5262965), hereinafter simply Putnam.

2. In regard to claim 1,7, Putnam teaches a method and computer readable medium, comprising: receiving one or more information attributes to be applied to an object; see col.27 lines 25-27; determining if the one or more information attributes are in contention with one or more geometry attributes of the object; see col.18 lines 41-47; and when the one or more information attributes are in contention with the one or more geometry attributes, modifying the one or more geometry attributes to reduce the contention with the one or more information attributes. See col.20 lines 55-64.

3. In regard to claims 2, 8, Putnam teaches a method and computer readable medium, wherein the contention between the geometry attributes and the information attributes is reduced (slow inputting and outputting of data) without modifying the information attributes. See col.7 lines 59-52.

Art Unit: 2676

4. In regard to claims 3, 9, Putnam teaches a method and computer readable medium, wherein the modified one or more geometry attributes are proportional with the one or more information attributes. See col.20 lines 60-64.
5. In regard to claims 4, 10, Putnam teaches a method and computer readable medium, wherein the geometry attributes are derived from the object. See col.20 lines 50-54.
6. In regard to claims 5, 11, Putnam teaches a method and computer readable medium, wherein the geometry attributes are derived from an input image of the object. See col.20 lines 50-54.
7. In regard to claims 6, 12, Putnam teaches a method and computer readable medium, further comprising: combining the modified geometry attributes and the information attributes to form a texture map. See col.19 lines 5-10.
8. In regard to claim 13, 16, 20, Putnam teaches a system and apparatus, comprising: a processor; a memory coupled to the processor; a storage device coupled to the memory and the processor, see col.16 lines 40-50, the storage device comprising: a geometry modifying code to modify one or more geometry attributes of an object to create new geometry attributes that reduce contention with one or more information attributes of the object; see col.20 lines 55-64; and a texture map generating code to combine the new geometry attributes with the one or more information attributes to create a texture map to be applied to the object. See col.18 lines 61-65.
9. In regard to claims 14, 17, 21, Putnam teaches a system and apparatus, wherein the storage device further comprising: an information attribute receiving code to receive the information attributes to create the texture map. See col.18 lines 61-65.

Art Unit: 2676

10. In regard to claim 18, Putnam teaches a system and apparatus, wherein the information attribute receiver includes an attribute separator to separate the information attributes from background attributes. See col.27 lines 25-27

11. In regard to claims 15, 19, 22, Putnam teaches a system and apparatus, wherein the geometry modifying code modifies the one or more geometry attributes of the object to preserve informative content of the information attributes. See col.20 lines 55-64.
